

Ulsyairil Oktorio Fadillah

Balikpapan, East Kalimantan 76126 // [+6282198991068](tel:+6282198991068) // ulsyairil@outlook.co.id

Full Stack Developer with 3+ years of experience designing and developing end-to-end web applications, spanning frontend, backend, and deployment. Experienced in using Laravel, Node.js, and Vue/Nuxt.js to build scalable and maintainable systems.

Experienced in managing production systems, including performance optimization, CI/CD pipelines, and incident troubleshooting. Experience developing machine learning-based solutions and routing optimization to improve operational efficiency.

Skills

- Full stack development
- JavaScript ecosystem
- Express.js for server applications
- Laravel for PHP development
- REST API management
- Development lifecycle
- Database solutions expertise
- Git version control proficiency
- Docker for application deployment
- Web server configuration
- System architecture design
- Debugging techniques
- Data analysis techniques
- Team collaboration skills
- Accountability
- Project accountability

Education

Associate in Electronics Engineering:
State Polytechnic of Balikpapan
Indonesia, East Kalimantan,
Balikpapan - 2019

Experience

Programmer – June 2025 - December 2026

Telkom Regional Infrastructure 4 Kalimantan, Indonesia,
East Kalimantan, Balikpapan

- Developed the DALAPA system to digitize technician workflows, reducing manual processes and increasing operational efficiency.
- Implemented machine learning models for ticket classification, accelerating the triage process and improving assignment accuracy.
- Built a route optimization system using OSRM and Valhalla to improve technician travel efficiency in the field.
- Improved system performance and maintainability through code refactoring and process optimization.

Full Stack Developer – February 2024 - June 2025

CV. Digital Teknologi Persada, Remote

- Develop a web-based hospital information system for use in production environments to support healthcare operations.
- Build and manage CI/CD pipelines to automate build, testing, and deployment processes, reducing manual processes.
- Handle incidents on production systems (downtime, overload) through root cause analysis, thereby improving system stability.
- Collaborate with the team to improve release process efficiency and application reliability.
